

Flow Control and Calibration for Environmental Gas Analysis

Calibration of an Air Sampling Canister

Alicat's Whisper Series of mass flow meters feature low pressure drops for minimal system impact. Full-scale drops as low as 4 mbar allow accurate flow verification of volumetric flow controllers on air sampling canisters. Integrated rechargeable batteries give these portable meters up to 12 hours of continuous use in the field.

Flow Control for Gas Analysis and Air Monitoring

Whisper Series mass flow controllers combine low pressure drop with precision control for weak-vacuum gas analysis applications. These devices are also well-suited to airborne gas sampling and analysis. Frictionless rolamite valves on larger controllers provide stable control for higher flow rates.
